

SETUP INSTRUCTIONS

Step 1: Remove the Varia.Lux base and 3-Part Pole from the case.

Step 2: Rotate Aluminum Foot 90°.

Step 3: (A) Insert bottom of 3-Part Pole into the hole of the foot on the base. (B) Pull the graphic up to the top of the 3-Part Pole and (C) attach the metal graphic profile to the top pole cap.

Step 4: You can adjust the forwards & backwards lean of the graphic by twisting the purple lean of the graphic by twisting the purple bumper (D) at the bottom to the pole.

Troubleshooting: If your graphic does not retract into the base when collapsing your display, pull it back out slightly and it will regain tension and retract again - similar to a window shade.
