

SETUP INSTRUCTIONS

Step 1: Remove the Varia.Lux base and 2-Part Pole from the case.

Step 2: Insert the Pole into the Pole Adaptor.

Step 3: Insert the Pole Adaptor sideways into the channel on the back of the base. Then twist the Adaptor by pulling the pole into a locked position with the pole facing up.

Step 4: (A) Insert bottom of 2-Part Pole into the hole of the foot on the base. (B) Pull the graphic up to the top of the 2-Part Pole and (C) attach the metal graphic profile to the top pole cap.

Troubleshooting: If your graphic does not retract into the base when collapsing your display, pull it back out slightly and it will regain tension and retract again - similar to a window shade.
